

# Bhargavi Poyekar

in/bhargavi-poyekar poyekarbhargavi@gmail.com 9930945072 Mumbai, MH

## CORE COMPETENCIES

- Google Cloud Run, Pub/Sub, Cloud Scheduler, IAM with **Terraform & Ansible** for repeatable deployments.
- Certified as **AWS Developer Associate**, **AWS Cloud Practitioner**, and **Terraform Associate (003)**.
- Proficiency in **SQL, Linux, Docker, Bitbucket Pipelines** and **Git** for full stack development and version control.
- Knowledge of **data structures, algorithms, system design and complexity analysis**.
- Exceptional communication, interpersonal & analytical problem solving skills.

## PROFESSIONAL EXPERIENCE

### Associate Software Engineer, K2Q Capital Pvt Ltd.

Aug 2025 – Present

- Built and deployed **Google Cloud Run Functions** with least-privilege IAM and implemented a **Terraform based automation** framework, standardizing provisioning of Cloud Run, Pub/Sub, Scheduler, and service accounts, reducing manual setup effort and configuration drift.
- Developed **Ansible automation playbooks** for multi service deployments, enabling repeatable rollouts and rollbacks that improved release consistency and cut deployment time significantly.
- Designed **CI/CD pipelines** using Bitbucket Pipelines, streamlining **Docker builds** and environment promotions, reducing deployment failures and accelerating release cycles.
- Enabled operational automation and monitoring with **Google Cloud Alerts & logs**, improving issue detection and resolution time, while enforcing **Git peer reviews, JIRA-tracked releases**, and up to date documentation.

### Software Developer, University of Maryland, Baltimore County

June 2024 – June 2025

- Built a self-service lab deployment portal using **Django and Python**, enabling students and instructors to securely launch and manage multi VM environments with isolated networks for course projects saving **80+** instructor hours per semester.
- Provisioned **AWS EC2 instances** within VPC public/private subnets using **Terraform**, with secure SSH access configured via a Bastion Host and automated VM configuration managed using **Ansible**.
- Streamlined platform scalability and reusability by containerizing Node services and modularizing infrastructure using **Infrastructure-as-Code (Terraform)**, reducing deployment time by 60%.

### Software Engineer (Cloud) Intern, University of Maryland, Baltimore County

Jun 2023 – May 2024

- Engineered a secure, full-stack **Django web application** for managing 50+ Linux VMs, integrating **role-based access control (RBAC)**, **SSL/TLS**, and secure session handling to support 100+ users.
- Automated VM lifecycle operations using Python and **Ansible**, embedding **SSH hardening**, jump host routing, and key based authentication to enhance system security and reduce manual overhead.
- Utilized **Ansible Vault** for secure credential storage, encrypting sensitive data and ensuring controlled access for over 100 students and faculty using the VM infrastructure.

### Software Developer Intern, Origin Cloud Tech

Jun 2020 - Dec 2020

- Developed a scalable Laravel based LMS for 10K+ users, improving engagement, secured with **OAuth2 & MFA**, integrated payment, geolocation, Zoom APIs, and optimized **normalized SQL architecture** reducing query time by 10% and boosting efficiency with PHPUnit tests ensuring data integrity.

## PROJECTS

### HDFS to S3 Secure Data Transfer Application (Python, Hadoop, AWS):

- Developed a **Python** application to automate file transfers from **Hadoop HDFS** to **AWS S3**, reducing manual data handling time by 50%. Implemented **IAM Role policies, STS AssumeRole for temporary security credentials, and client side encryption**. Enhanced security by using **AWS SSM Parameter Store** to store sensitive credentials, replacing environment variables.
- Integrated **Amazon CloudWatch** to monitor file transfers, track errors, and log performance metrics. Configured **Amazon SNS** to send email notifications for transfer status updates (success/failure).
- **Tech:** HDFS, S3 Bucket, IAM Roles, Python, boto3, GIT, Linux, CloudWatch, SNS, STS, SSM.

### Flask API for Receipt Processing (Containerized, Scalable Deployment, SOLID Principles):

- Delivered a **Flask API** for calculating reward points, using **Docker** to ensure consistency across environments.
- Implemented **API testing** using **Postman**, automating tests for different API endpoints. Integrated continuous testing into **GitHub Actions** for automated deployment and validation.
- **Tech:** Python, Flask, JSON, Docker, Docker Compose, Postman, GitHub Actions, Pytest.

## TECHNICAL SKILLS

**Languages and Databases:** Python, Node.js, C, PHP, Go, JavaScript, SQL, HTML, CSS, MySQL, SQLite, MongoDB.  
**Frameworks:** Django, Django-Rest, Laravel, Selenium, Express, React, Flutter, Android Studio, Scikit, TensorFlow.  
**DevOps and Cloud:** Ansible, Terraform, AWS, Docker, Kubernetes, EC2, S3, Lambda, IAM, VPC, Route53, Vault.  
**Others:** GIT, Linux, VSCode, Pytest, Matplotlib, Tableau, jQuery, Pandas, Numpy, Rest API, Ajax, Postman.

## EDUCATION

University of Maryland, Baltimore County - Baltimore, MD | MS in Computer Science | GPA: 3.85/4.0  
Sardar Patel Institute of Technology, Mumbai, India | B.Tech in Computer Engineering | GPA: 9.4/10

Aug 2022 - May 2024  
Aug 2018 - May 2022
